Experiment 11

Deployment and Migration of the Transport Management System in Zoho Creator

Aim

To deploy and migrate the Transport Management System in Zoho Creator from a development environment to a production environment while maintaining its forms, reports, dashboard, workflows and data.

Procedure

1. Log in to your Zoho Creator account and open the Transport Management System application.
2. Prepare the application: verify all forms, reports, dashboard, Deluge scripts and workflows.
3. Test the application: check trip scheduling, lookup selection, vehicle status updates, insurance expiry alerts and dashboard charts.
4. Back up data: export or back up the required application data before migration.
5. Package the application using the available deployment or export options.
6. Deploy the application: publish it from Development to the Stage environment and then to Production.
7. Configure dependencies: verify user permissions, connections, email settings and other configurations.
8. Validate the deployment: test the application in the target environment to confirm all features work.
9. Complete migration: confirm that the application and required data are available in Production before switching users to it.

Environments

Environment	Purpose
Development	Build and change forms, reports, dashboard and workflows
Stage	Test the packaged version safely, without affecting live users
Production	Live environment used by the manager, coordinators, drivers and passengers

Deployment Checklist

Step	Check	Expected Result
1. Prepare	Forms, reports, dashboard, scripts and workflows reviewed	No errors in the application
2. Test	Add trip, status workflows, insurance alert, dashboard	All features work in Development
3. Back up	Scheduled backup with schema and data	Backup listed as Active
4. Publish to Stage	Package published as version 1.0	Application appears in the Stage column
5. Validate	Repeat tests in Stage with demo users	Features and permissions work
6. Publish to Production	Promote the tested version	Application available to live users

Output Screenshots and Diagram

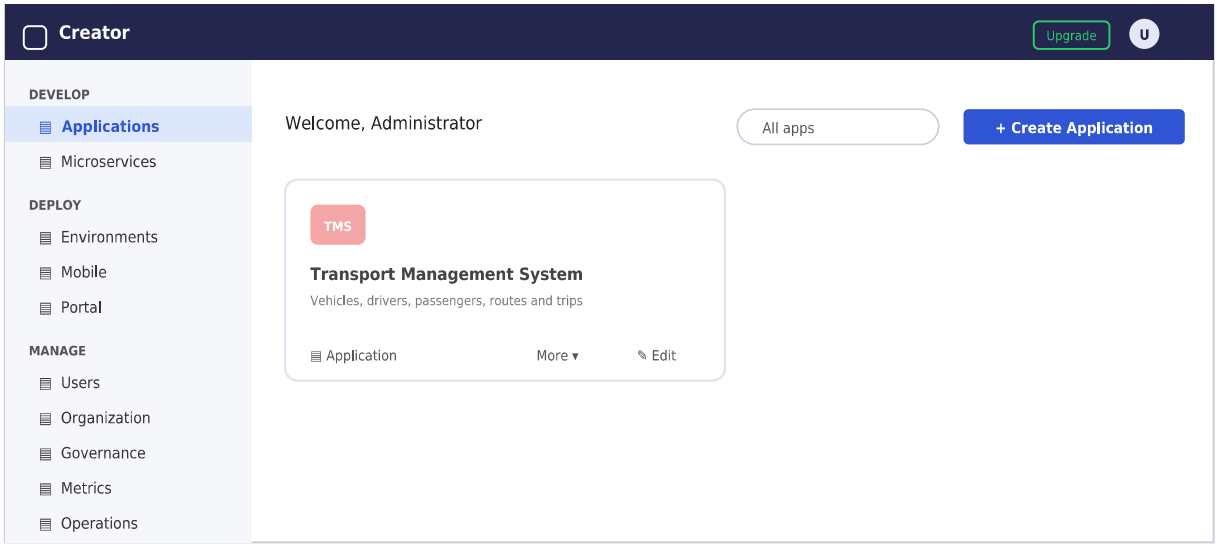

Figure 11.1: Zoho Creator Applications page showing the Transport Management System application (TMS) (illustrative mock-up, not a screenshot).

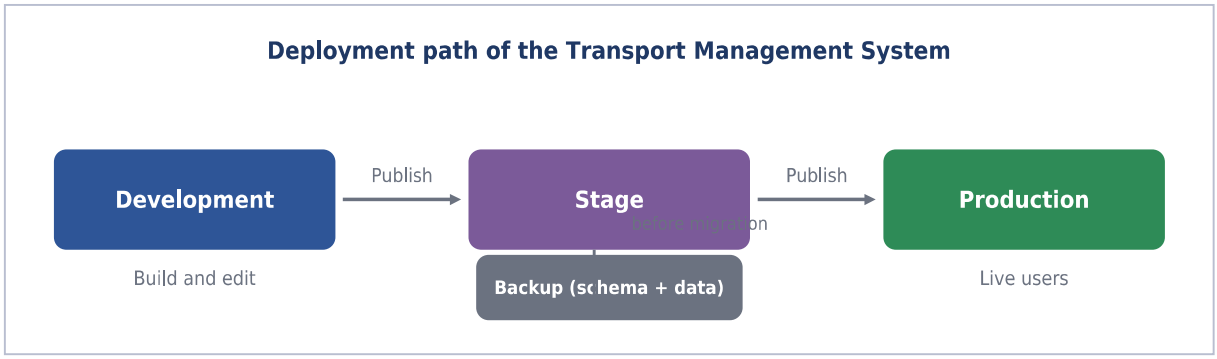

Figure 11.2: Diagram of the deployment path (illustrative diagram, not a screenshot).

Backup Configuration

Recommended settings for the Transport Management System.

Setting	Value
Application	Transport Management System
Frequency	Monthly
Components	Schema + Data
Delete backup after	6 months

Result

Application deployment and migration are completed successfully when the Transport Management System and its required configurations operate correctly in the target environment.
